## evaluate | PhantomJS

[phantomjs.org](#) › [api](#) › [webpage](#) › [method](#)

evaluate. evaluate(function, arg1, arg2, ...) {object} Evaluates the given function in the context of the web page. The execution is sandboxed, the web page has no access to the phantom object and it can't probe its own setting.

## Pass arguments with page.evaluate - Stack Overflow

<https://stackoverflow.com> › [questions](#) › [p...](#)

21-Jun-2016 · 8 answers

I'm using PhantomJS page.evaluate() to do some scraping. My problem is that the code I pass to the webkit page is sandboxed, and so has no access ...
